## 1. What is PSKmail?

PSKmail is a ham radio working mode, which uses data traffic (PSK) : The clients and servers work in PSK-250 mode with and among each other. Everyone can connect to anyone.

An important element of PSKmail is the interconnection of several working modes and transmission media.

- > APRS Automatic Positions Reporting System
- > Server network
- > Internet
- > local mailbox
- > more planned

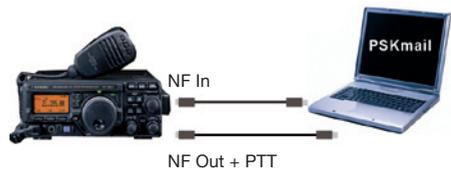

Many things are possible. You can read and send email (fetch weather reports, send direct messages) and update the ships position through the APRS system (= Automatic Position Reporting System). PSKmail can provide access to internet services specifically worked out for sailors. You can use all functions with the Afu-license, but the servers can even be used without internet connection. Without Afu-licence, many functions can only be used by logging in. Therefore PSKmail in general is a SWL (listeners)-application !

## 2. What do you need for PSK-mail?

In the simplest case (SWL, listeners), one only needs a SSB shortwave receiver, a notebook, a connecting cable with cable interface\*, and the PSKmail software V1.01 Linux or the INTERMAR PSKsoftware Win 1.0 for Windows XP.

Of course licensed amateurs use a shortwave transceiver (SSB) for sending.

Connection:

Transceiver over microphone jack

- > Mik
  - > PTT
  - > GND
- and speaker jacks
- > NF out
  - > GND
- or over DATA jack (at the back)
- > Data IN (NF-IN)
  - > Data OUT (NF-OUT)
  - > PTT
  - > GND

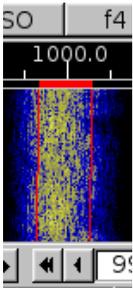

\* see [www.pskmail.de](http://www.pskmail.de) > Interface

## PSKmail system = PSK250 (250 Hz bandwidth)

System TRX = SSB, USB

PSKmail is a narrow band mail delivery system used by amateur radio hams via short wave (HF) communication.

To optimize the reception quality, you can switch on a narrow 500 Hz filter into the receiver. Most of the transceiver can be retrofit with a narrow filter into the USBmode control. See manual. The advantage of a narrow filter is, that the area of only 500 Hz is bugged and you can't be disturbed simultaneously from several different signals. Additionally or alternatively, you can use a DSP as long as the recipient provides you.

The frequency to set is (dail-frequency) – 1 kHz from the center frequency, e.g. PSK-APRS-Random 10.148,0 kHz, dailfrequency 10.147,0 kHz

Dail-frequency, 2,4 kHz USB, 1000 Hz Waterfall  
Center Frequency 10.148 kHz USB

## 3. PSKmail, what does it cost ?

The PSLmail software, Linux and Windows are available free of charge. The user only needs the equipment described above. For amateurs usually always available. To connect transceiver and notebook, you need a small sound card interface. The cost amounted to 10,00 € to 100,00 €, depending on the equipment.

Small interfaces only transmit the NF and turn the transceiver on.

Complex interfaces control, among other things, the transceiver for a possible server-triggered frequency change.

See [www.pskmail.de](http://www.pskmail.de) > Interface and PSKmail Shop

## Server System

The PSK-APRS-Random-Frequency 10.147,0 kHz should be used by all servers, unless there would be multiple servers installed for different frequencies. INTERMAR operates five servers at different frequencies (see frequency-map).

The PSK-APRS-Server is exclusively used for PSK-APRS-Functions. There is no weather, email or file-retrieval allowed.

Special servers, at 20m, 30m, 40m and 80m, are available for these functions.

Other servers can be connected on the PSC-APRS frequency

Then you suggest a QSY-frequency and get a new QSY-release to the specified frequency.

The user has to change the frequency of his transceiver e.g. to retrieve his mail.

---

Attention All other functions, WX Email and files on other frequencies

> you can find it on the Frequency-Plan

## 4. Description of performance

**80 % of all information will be run in APRS-system without a PSKmail-server-connection.**

That means, that the most important information proceeds without long waiting time or any connection issue - or occupied lines. Simply enter info, send, ready or keep the receiver into operation.

**Following functions are working without being connected to a server**

- > send APRS Position report automatically / manually, with or without GPS.
  - > send APRS beacon (small info) with your position; can be changed any time, manually or automatically by using the boardpanel display on the yacht-position-map.
  - > Send APRS weather report with your position; can be changed any time, manually or automatically by using the boardpanel display on the yacht-position-map.
  - > Send APRS speed and itinerary information, manually or automatically by using the boardpanel display on the yacht-position-map.
  - > Send APRS messages (up to 67 characters) to other amateurs worldwide
- > Get APRS messages from other amateurs worldwide.
  - > Get APRS-information from APRS-info : e.g. tides, camping / motorhomes places, APRS neighbouring stations, APRS-MSG-Group and others.
  - > Send APRS-MSG-Group information by closed APRS Message Group to the PSKmail-receivers.
  - > Send APRS-email (small text with 67 characters) to all email-adresses you've got worldwide.
  - > Get APRS-email (small text with 67 characters) from PSKmail-email. Call@pskmail.de Adresses and other amateur-emails e.g. ...@DARC.de
  - > Get weather reports automatically (at fixed broadcast times).
  - > Get automatically providing reception of Europe SYNOP-weather-report.
  - > Arranged for automatic reception of Grip-weather reports for Europe and the North-Atlantic.
  - > Also arranged for automatic reception of other yacht-positions, reported on a map in connection with Grib data.
  - > Automatic reception of bulletins

> Automatic SOS-function with extra icon and extra text

Also if there are many users, operating will not be disturbed with these solutions. The user can always send data without waiting.

## **20 % of all information will run to a server with Connect**

### **Following functions are running to a server with Connect**

Retrieving and working out amateur-email (only for legitimate amateurs)

- > Retrieving local mail from the server (mails are in local serverbox)
- > Retrieving Grib Files (weather reports)
- > Retrieving amateur' websites as a file (text e.g. DARC)
- > Retrieving special files (from filelist) e.g. Weather reports, help information, lists, surveillance stations, etc.

If you limit yourself to the most basic information, the servers won't be occupied.

You don't need elaborate expensive hardware, INTERMAR makes the software available on a USBstick, free of charge

and a cheap small soundcard interface, which can be reproduced.

1. Worldwide PSK >APRS frequency 10.147 kHz Dial Qrg, 2,4 kHz USB 1000 Hz Waterfall Centerfrequency 10.148 kHz.  
For all other frequencies : see www.PSK-mail.de>Home PSKmail Server.

## **Application Ham Shack-Operator**

> Send an APRSmail directly on board from a home-PC

**To:** aprs@pskmail.de

**Subject:**  
DJ4WL: Hi Tom 73 from Board, Rolf: DK4XI

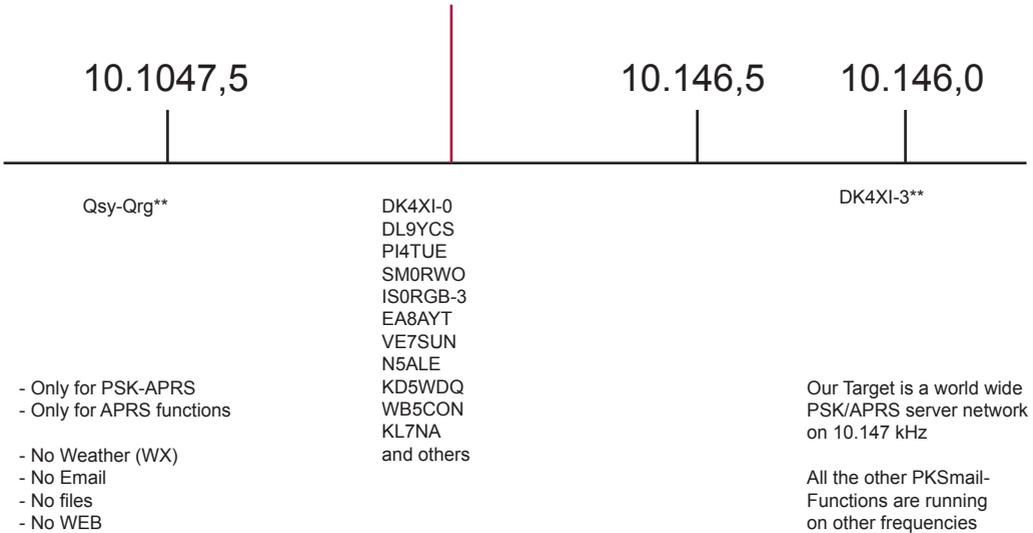

(email text as above, capitalized Call, colons are very important, max. 67 characters).

> Send an APRS message directly on board from a home-PC  
Open message-window in UI-View program, enter call, I for I-Gate and enter text. Max. 67 characters

> Send an internet email  
Write email in email program, address e.g. call.@pskmail.de an send it

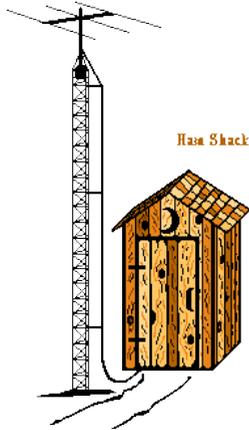

# PSK > APRS QRG

## 10.147 kHz USB \*

Center Frequenz 10.148 kHz USB  
\*\* For Email, WX and files

## 5. Ham Shack Operator

Every ham-shack-operator as well as SWL's have the opportunity to participate to the PSKmail communication via internet from their home PC.

Possibilities via internet from your home PC :

### **PSKmail Monitor**

All servers have an online-site, on which you can watch the live radio communication.

See : [www.pskmail.de](http://www.pskmail.de) > Home

### **PSKmail chat**

A PSKmail chat room has been installed. There, you have the possibility to chat live.

See [www.pskmail.de](http://www.pskmail.de) or [www.pskmail.eu](http://www.pskmail.eu)

### **PSKmail Forum**

There are two forums with the topic PSK-mail.

See in German [www.pskmail.de](http://www.pskmail.de)

See in English [www.pskmail.eu](http://www.pskmail.eu)

See discussion

### **PSKmail Freelist**

With PSKmail Freelist, you have the possibility to enter and retrieve informations via email.

See in German [www.pskmail.de](http://www.pskmail.de)

See in English [www.pskmail.eu](http://www.pskmail.eu)

### **PSKmail Wiki**

All english spoken news and additions are presented here.

See in English [www.pskmail.eu](http://www.pskmail.eu) > enter keyword "wiki" in search window

### **PSKmail Position Report**

All positions sent via PSKmails are visible on a map

See [www.pskmail.de](http://www.pskmail.de)

### **PSKmail Serverlist**

All active PSKmails, calls, frequencies and options are listed in the serverlist

See [www.pskmail.de](http://www.pskmail.de) > Home

### **PSKmail APRS-Message Online Window**

You can directly send an APRSmessage via PSKmail in an internet-online-window

on a homepage.

See [www.intermar-ev.de](http://www.intermar-ev.de) > Home

## **PSKmail APRS-Message UI-View**

With the UI-View-Program (APRS) one can directly send a message on board of a friendly yacht.

See [www.ui-view.org](http://www.ui-view.org)

## **Reading PSKmail APRS-Messages**

You can read your received messages on the APRSserver FINDU

See <http://www.findu.com/cgi-bin/msg.cgi?call=DK4XI> (own call)

## **PSKmail APRS-Email-Server**

Every OM can send an "APRSmail" from his home PC directly to a sailer e.g. in the Atlantic. If the sailer has a radio relay reception at that moment, the APRSmail will directly be displayed on the incoming email window.

Important : It's not an email sent to the email address of the transceiver, who retrieves the message afterwards. This email will be sent to an APRS-email-server, which will convert the APRSmessage into a message on the APRS-network.

This message may be retrieved at any time, also later on by the command "Get Message" in the PSKmail-program.

See [www.pskmail.de](http://www.pskmail.de) >PSKmail – email

## **PSKmail Standard-Email**

Obviously any OM can send emails from their home PC to PSKmail-users. The PSKmail-user has the opportunity to use an own email address only for the PSK-mail-communication.

INTERMAR has set up a separate email account in collaboration with Google. The INTERMAR email-server is [call@pskmail.de](mailto:call@pskmail.de)

Every OM can get his own Address : [call@pskmail.de](mailto:call@pskmail.de)

See [www.pskmail.de](http://www.pskmail.de) > PSKmail – Email

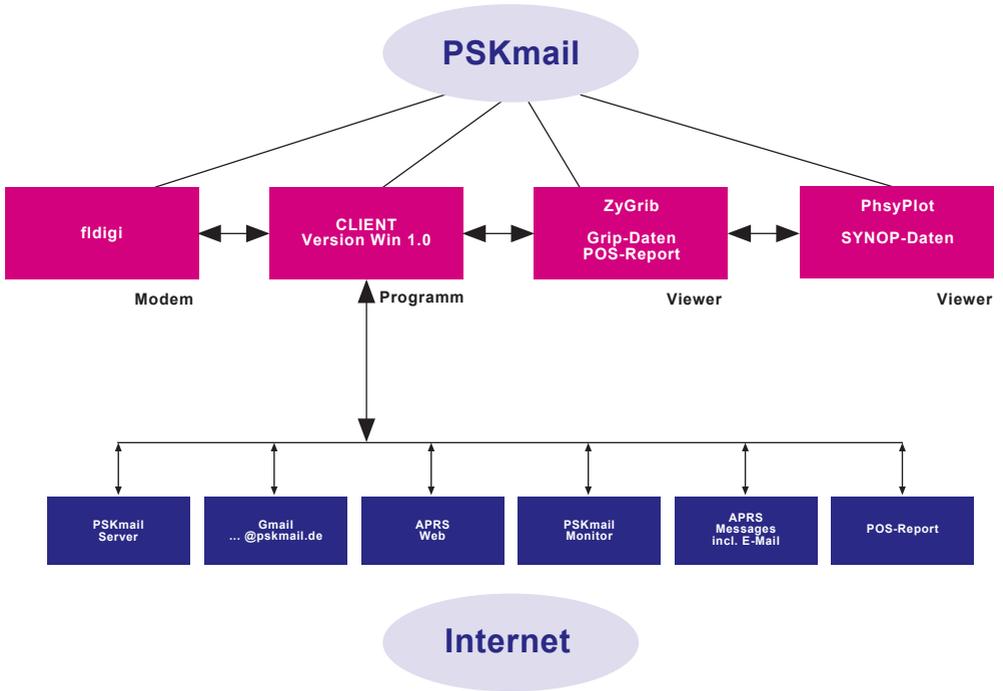

## **PSKmail TelNet**

New applications as :

- > Retrieving local emails from serverbox (worldwide)
- > Retrieving files from selected servers
- > Other new applications.

DJ4WL. Hallo Thomas Grüse aus der Karibik von Bord der SY-JOY 73 Rolf Send

Outgoing-Message / APRS-E-Mail

The screenshot displays the INTERMAR PSKmail Win V 1.0 application window. The main interface includes a menu bar (APRS, Pos-Report, WX, Files, E-Mail, Mbox-Local, Web, Abort) and a toolbar (Pos-Beacon, Ping, APRS-Info, Emergency). The main area is titled "Operator-Data" and shows information for operator "DK4XI-5" on board "SY-JOY". It includes fields for Course (357), Speed (22.9 Kts.), Latitude (49.301122), and Longitude (7.268175). There are also fields for "Rolf on tour caribic on board SY-JOY" and "27T 1017B Claude". A message window is open, displaying a message from "BTU KA1JF Janie DE WA1BYL Butch KN" with the text: "The gran sun is getting hotter and get that problem fixed before you have to deal with the sun. Thanks f r the call and if I go by that way today I will stop in and say hi. Take care with that task!! BTU KA1JF Janie DE WA1BYL Butch KN WA1BYL WA1BYL de KA1JF KA1JF OK Butch It is important to keep the grandchildren happy! (and children too!) I use a". An "Emergency" dialog box is overlaid on the interface, containing the text: "You are about to send an APRS EMERGENCY message which will appear on all active APRS maps. If that is NOT what you want please CANCEL". The dialog box has a "Send Emergency Message" button highlighted in yellow. An arrow points from this button to the "Emergency" button in the main interface toolbar. The main interface also shows an "Incoming-Message / APRS-E-Mail" section with a message from "DJ4WL" and a "Send" button.
